

CFRP + Bonding chains

Nv

G

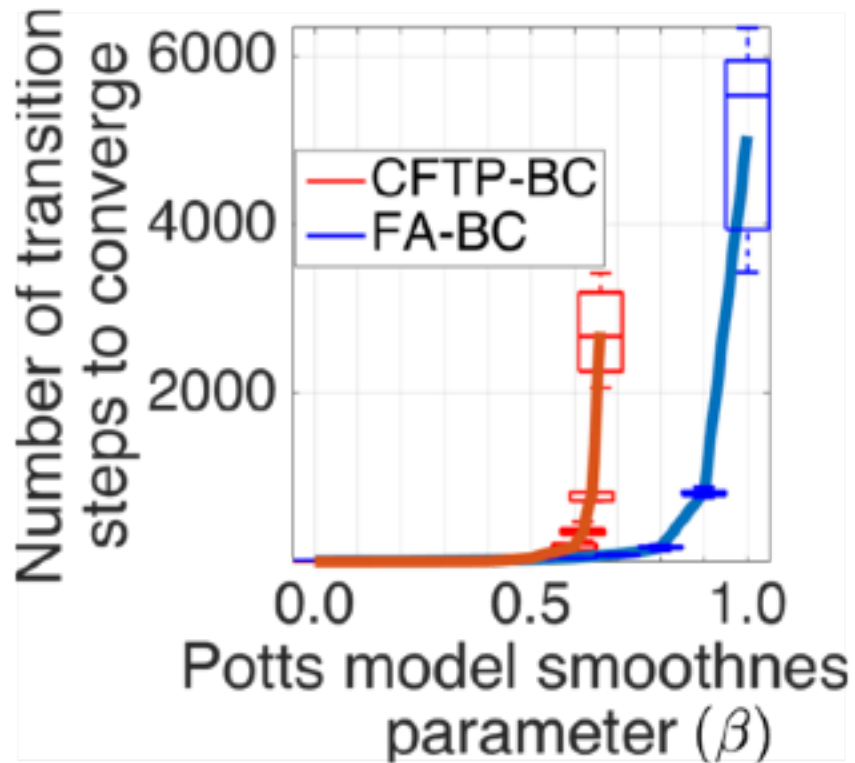

Nv

G

- Running time of CFTP algorithm which is dependent on the state sampled
- Naive user with limited patience who aborts a long run of the algorithm will introduce bias

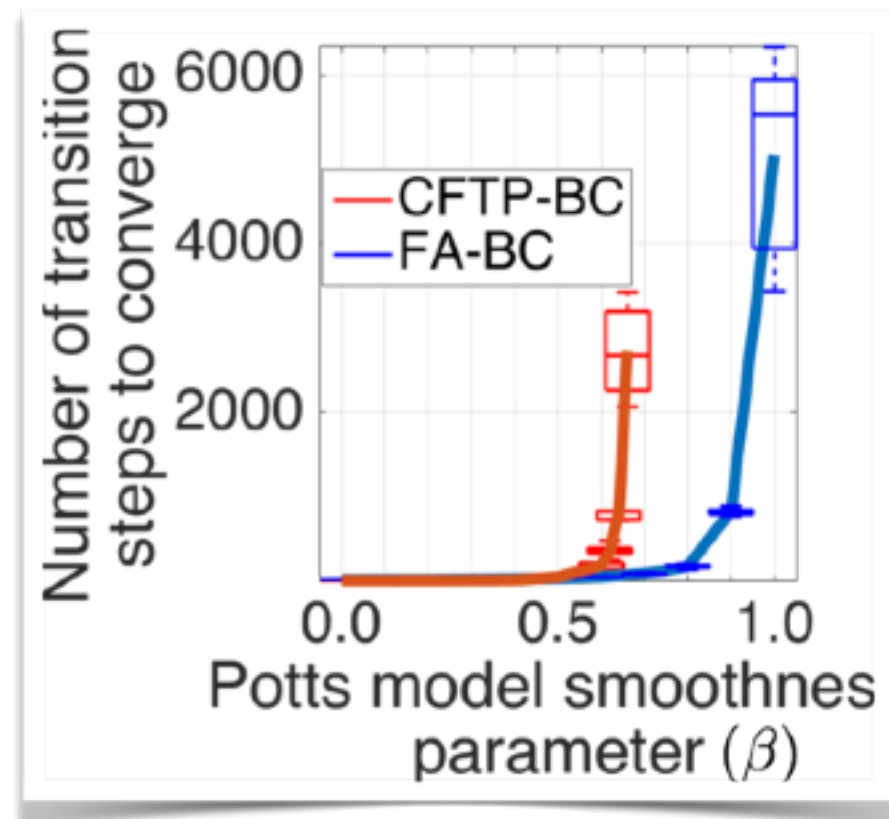

Orders of magnitude slower as compared to FA-BC (with strong prior)

CFTP + Bounding chains

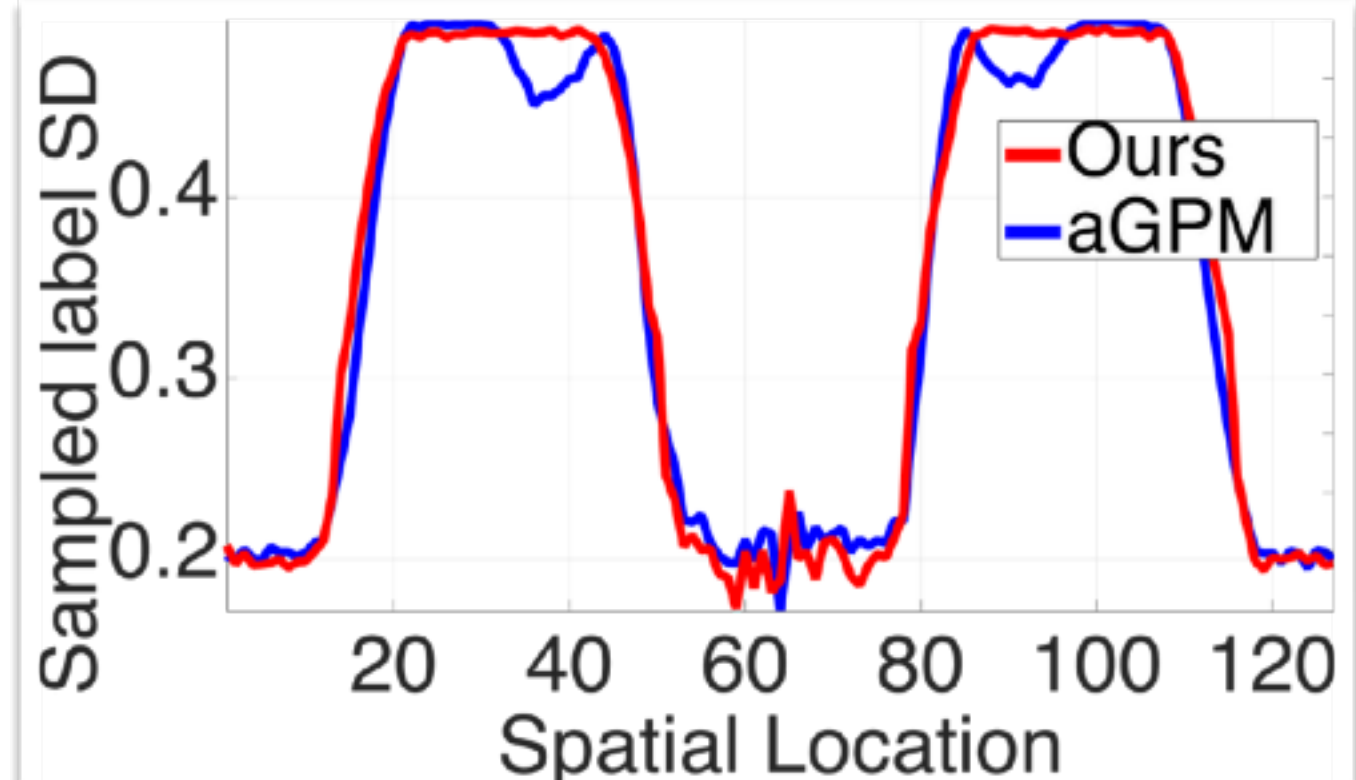

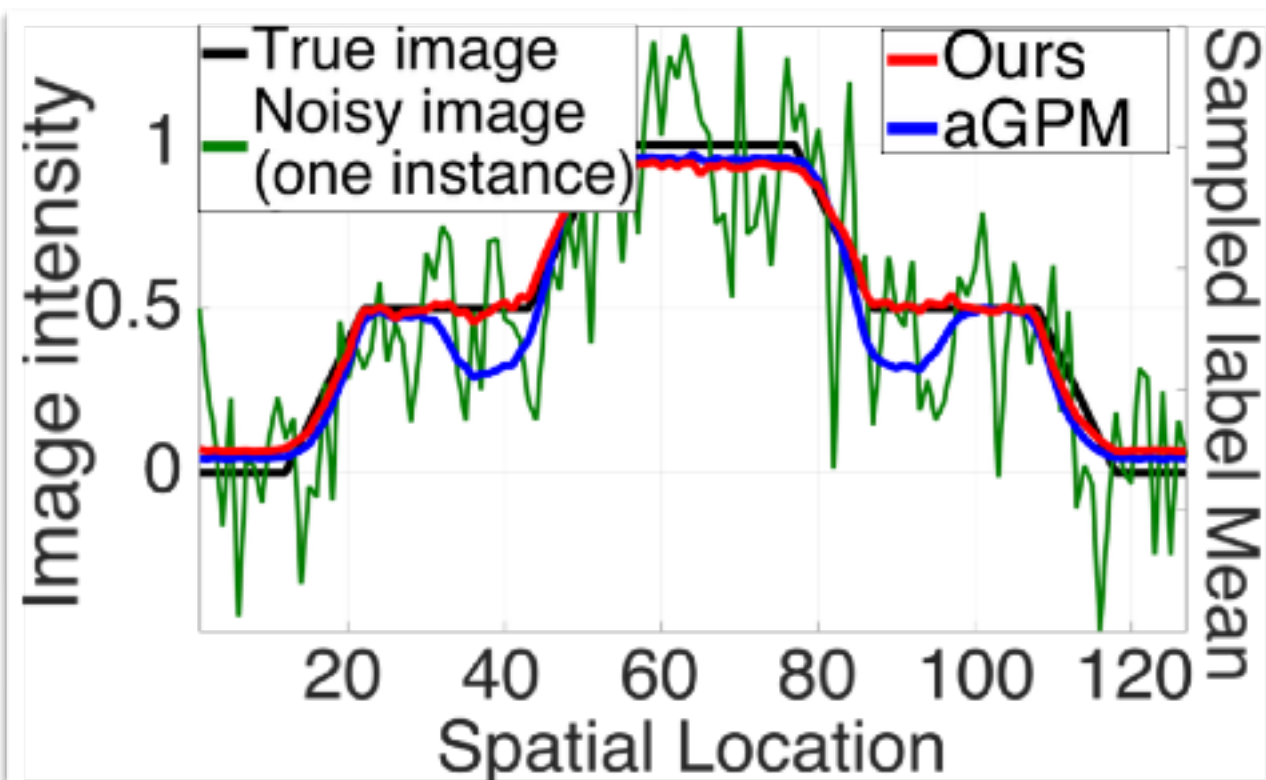

- Running time of CFTP algorithm which is dependent on the state sampled
- Naive user with limited patience who aborts a long run of the algorithm will introduce bias

Orders of magnitude slower as compared to FA-BC (with strong prior)

Validation on simulated data

Simulated 128 voxel – 1D images with 2 labels

Conclusion: Our Mean and SD estimates are close to actual values
